Group	indicates different labs participating in the challenge: Lab 1, 2, 3.
Model Desc.	Includes description of type of models used e.g. ML Model like XGBoost, Deep Learning Architecture (e.g., 2D or 3D CNN, Vision Transformer, etc.)
Model Param.	indicates the size of the model.
TIME	indicates the amount of time it took to train the model. (Pretraining time for foundation models may not be known).
GPU	indicates the type of GPU used.
UsedImages	indicates whether the T1w scans were used to train the model (0 - NO, 1 - YES).
UsedDemographicInfo	indicates whether demographic data were used to train the model (0 - NO, 1- YES).
UsedScannerInfo	Indicates whether the model used any scanner information for training (0 - NO, 1- YES).
UsedAPOEInfo	indicates whether APOE genotype values were used to train the model (0 - NO, 1- YES).
VG 1-5	represents the Cross-Validation Groups 1-5. For each cohort, the MAE and R ² score must be reported
Avg	indicates the average MAE and R ² score for all the Cross-Validation Groups.
CN, MCI and Dem.	indicate the MAE and R ² score for the diagnostic groups: Controls, MCI and dementia, respectively.
