Group	indicates different labs participating in the challenge: Lab 1, 2, 3.
Model Desc.	Includes description of type of models used e.g. ML Model like XGBoost, Deep Learning Architecture (e.g., 2D or 3D CNN, Vision Transformer, etc.)
Model Param.	indicates the size of the model.
Time	indicates the amount of time it took to train the model. (Pretraining time for foundation models may not be known).
GPU	indicates the type of GPU used.
Image	indicates – whether the T1w scans were used by the model, along with descriptions of any further processing performed on the images before being used for training.
Demo. Details	indicate whether the model used any demographics for training. If not, put N/A.
Scanner Info.	Indicates whether the model used any scanner information for training. If not, put N/A.
APOE	indicates whether the model used APOE genotype values for training. If not, put N/A.
VG 1-5	represents the Cross-Validation Groups 1-5. For each cohort, the MAE and R ² score must be reported
Avg	indicates the average MAE and R ² score for all the Cross-Validation Groups.
CN, MCI and Dem.	indicate the MAE and R ² score for the diagnostic groups: Controls, MCI and dementia, respectively.
